Hello. My name is and I work for the School of Public Health in Kinshasa in collaboration with the Ministry of Health. We are currently conducting a survey in Kinshasa on several issues related to women's reproductive health and safety. We are asking you to participate in this study as you have participated in a previous study that we conducted last year, and you indicated that you would be willing to be	\$ {available} = 'yes' and \$ {pl_woman}

participate in a follow-up survey. Although you agreed then to be recontacted for future surveys, you still have the right to decline to participate at any time. However, we would very much appreciate if you joined this study, as the information we collect will help inform the government to better plan health services. The interview should last about 1 hour, although the survey time for participants has ranged from 45 minutes to 1 hour and 45 minutes. Any information you provide will be strictly confidential and will not be shared with anyone outside our team members.

Participation in this study is voluntary, and if there is any question you do not want to answer, just let me know and I will move on to the next one. You may also interrupt the interview at any time. However, we hope that you will agree to participate in this survey as your point of view is very important.

Our team is collecting information on family planning, including contraception and abortion, in the Democratic Republic of Congo. We would like to ask you a few questions about yourself, as well as about activities related to family planning. Your information may be used for family planning activities and services in the Democratic Republic of Congo. The data collected will also be analyzed by researchers, but your name will be removed from all analyses, so your information remains anonymous.

This study will be carried out over a four-year period (2019-2024). Once you are included in the survey, we will visit you again after one year every year until the end of the study to interview you if you are still available to see us. As I mentioned earlier, each time we come back, you are under no obligation to see us, although our hope is that you will always be available to see us. This study is for public health surveillance. Additionally, there are two modules for research purposes. You have the option to decline to participate in those two modules. You may refuse to answer any question as many times as you want or decide to end the interview at any time. Do you have any questions about this survey?

B. Researchers Contact Information Take all the time you need to make your decision to participate or not in this study. We would be happy to answer any questions you may have regarding this research study. If you have additional questions, would like to voice a concern regarding this research, or if you have a research-related issue, you may contact the country coordinator of this study. I will also give you a copy of this form with the contact information of the study coordinator, whom you may contact directly for any questions regarding this study.
