Hello, my name is \${your\_name} and I work for the Ecole Nationale Supérieure de Statistique et d'Economie Appliquée (ENSEA) in Abidjan. We are conducting a study in the field of health, specifically on family planning in Côte d'Ivoire. To this end, I am going to read you this form in order to explain the main objective of the study and to give you additional information in order to solicit your participation in this study.

#### Presentation and purpose of the study

In collaboration with the Ministry of Health and Public Hygiene and Universal Health Coverage of Côte d'Ivoire and the Johns Hopkins University School of Public and Reproductive Health in the United States, the Ecole Nationale Supérieure de la Statistique et d'Economie Appliquée (ENSEA) is conducting a study called PMA (Performance Monitoring for Action).

The main objective of this study is to implement a follow-up system for performance in the area of family planning and women's reproductive health among the population and health facilities in Côte d'Ivoire. In addition, the information we collect will be used to inform social development programs in Côte d'Ivoire.

#### Why are you being asked to participate?

In order to better improve public health and to adequately plan health services for the population, your facility has been randomly selected to participate in this study. The data collected from your facility will also be used by the researchers to conduct analyses. However, the name of your facility will not be revealed, and all reports by researchers using data from your facility will only present the information anonymously so that your facility cannot be identified. No specific information about your facility will be released to the authorities in order to guarantee the principle of nondisclosure of individual data in the Ivorian statistical law.

We ask for your help in ensuring that the information we collect is correct. If there are questions for which another person is more competent to provide the information, we would appreciate it if you would introduce us to that person.

Answering these questions will take you approximately 1 hour. You may decline to answer some questions or choose to end the interview at any time.

Next, we would like to ask a series of questions to women between the ages of 15 and 49 who come for a consultation afterwards.

**Data privacy** Data will be collected on smartphones. All data will be sent electronically to the PMA study cloud server. The use and sharing of information will be subject to strict precautionary principles to ensure security and confidentiality. Once collection is complete, identifying information will be deleted from the database.

Before continuing, do you have any questions about this survey?
